>>> Remote CP/M Software Exchange Systems List # 59 > 02/24/85 revision by Kim Levitt >>
60 - Steve Sanders 03-85 / 61 - Jud Newell 04-85
62 - Kim Levitt 05-85 / (Full verification will be done with List #61)

SPECIAL NOTICE TO SYSOPS: Please inform Kim, Jud or Steve of any changes in your system to avoid being removed from the list, which is verified periodically. If your system is no longer functioning, please have a friend modem a message so your system can be deleted. ALL SYSTEM OPERATORS, see note number 8 at the end of this file for important details on maintaining your spot on this list.

(See file NEW-SYS.OPS on most RCP/M Systems for required information.)

Unless indicated otherwise, all systems are up 24 hours/7 days with no callback. Non-24 hour systems have hours of operation listed after sysop's name, callback systems have a "cb" before phone number. (NOTE: "(no ans if in use)" for "hours" means system is up 24 hrs unless in in use by the system operator locally.)

Systems charging fees have a dollar sign "$" after phone number. Some systems may restrict "first-time" users, be sure to read the opening info files when accessing a new system.

Baud Rates: (shown after sysop name/hrs)
1=110 / 3=300 / 4=450 / 6=600 / 7=710
B=Bell 212A 1200 / V=Vadic 1200 / C=CCITT V.22 bis 2400
(e.g.: PMMI = 1-7 (110 thru 710 baud), 300/1200 212A = 3B, 300 = 3)

Disk Capacity: (total disk space shown after baud rates)
K=Kilobytes / M=Megabytes

Verification Codes: (shown at end of entries which have been verified)
V=Verified / NA=No Answer / NN=New Number (date verified follows)
(systems verified by carrier or busy, no answer systems removed from next list unless system existance is re-confirmed)

(See notes at end of list for more information)

[PACKET RADIO SYSTEMS]

N6CXB-1 Packet RCPM ... 2 meter packet: 146.745 OUT/DOWN 600 khz. IN
Bob Finch (N6CXB); system is on 2-meter packet thru duplex 202C packet repeater, (formerly known as N6TD/R), call of RCP/M is N6CXB-1; currently supporting hex/ASCII unload of binary files and simple TYPE (etc.) for text files. (Since AX.25 protocol in use for ham packet doesn't require XMODEM for integrity of end-to-end virtual connection.) System currently a Cal-Tex SBC with Tapr TNC, custom interface & system software, 11MB dsk, 100 watts (erp) power. On-line 24 hrs subject to clear channel, (i.e. no voice traffic). Leave messages on N6BGW. (Glendale, CA area) (V:11/84)
N6BGW Packet RCPM ..... 2 meter packet: 146.745 OUT/DOWN 600 khz. IN
??? (N6BGW); (net users on channel through N6gpp/r) go here to use the mailbox.

[NOTES]

1. Call-back systems are those where a computer and real people share the same telephone line. To contact the people, just dial & let the phone ring until you get an answer. To contact the computer: 1) dial, 2) let the phone ring once, 3) hang up just before the 2nd ring, & 4) re-dial.

2. Note that the 212A/Vadic 1200 baud modems may not be compatable with yours. Some of the above systems are using Vadic 3451 Triple

modems, compatable with both Bell and Vadic Standard. Sign on the first time at 300 baud to determine system capabilities. Note also that PMMI's can sometimes be used over 300 baud with 1200 baud systems. PMMI baud rates are: 110, 300, 450, 600, 710 and are indicated above as "1-7".

3. Use of an alternative long-distance service should be considered when planning to modem over long programs. Charges on ITT Longer Distance, MCI, Sprint and Western Union are 50-60% of AT&T's regular long distance rates. These services and many others are available in many areas of the country and many of them can now call anywhere in the U.S. and will work fine at 300 and 1200 baud most of the time... (Note, however, that you may not be able to dial a system in Alaska, Hawaii or Canada depending on the service you get and sometimes you may have trouble connecting at 1200 baud.)

4. Total on-line disk capacity is shown for reference. Check the system documentation for exact details when logging on.

5. All times listed are local time, please observe operating hours for systems with scheduled availability.

6. If you find any errors in this listing, (or systems which do not support XMODEM protocol for file transfers), please forward the information to one of the systems listed at the top.

7. Many of the private/semi-private systems will allow System Operators access to the system. Each private/semi-private system has different rules regarding access. Most of these limit membership, which may mean that access is somewhat easier than fully public systems. However, as with public systems, quality varies greatly from system to system. Contact the System Operator first for details of system access, cost, etc.

8. SPECIAL NOTE TO SYSOPS: (by Jud Newell, 7/15/84)

a. In an effort to keep this list manageable, we're arbitrarily restricted each entry to 4 lines including name and phone number. To do this, we arbitrarily edited some listings. If you'd like to say something different, message Kim, Steve, or I, but please restrict your listing to no more than 4 lines.

b. You may be eligable for access on a no-fee basis to some of the private systems noted above. Contact the system operator of the system you wish access to for details of his policies.

VERIFICATION INFORMATION: By Jud Newell (Oct 22/84) This list is now being verified on a periodic basis. Our verification routines come to us from Jim Cambrion, and automatically dial the list, noting

whenever a computer carrier is detected. Unfortunately, after the computer is done, we still have about 100 systems to manually check. If we got a carrier tone or a busy signal, we considered the system to be in existance. If we got a disconnect recording, we deleted the system from the list. If no answer, we left the system on the list, but will delete from the next list if we can't make contact before then. Note that each non-answering system was tried at least 5 times over a 2 week period of time. The list will next be fully verified in April 1985. Note the codes at end of each entry are: (V: = system existance verifed by presence of modem carrier or busy signal on all tries) (NA: = no answer of telephone w/at least 5 verification calls) (NN: = new number). It will help us if you advise us of the status of any systems not showing a verification indication. If I deleted you in error, I apologize.
