I am seeking a device driver (ala ANSI.SYS) for an AT&T 6300 running MS-DOS.

Specifically, it should allow the AT&T to emulate one of the following:

1. a Televideo 910+, 925, 950, 920, or 912 (950 preferred)
2. certain ADM terminals which use similar escape sequences

=====

I would also appreciate pointers to information on the writing of such a driver, if none is available.

Thanks in advance.
