I'M NEW HERE. I found the directory of bboards while wandering through the ARPA net (DDN) and am hoping that this is the right address to ask my questions.

1. I have been thinking of getting a ram disk for my KayPro II (which has some Micro Cornucopia mods to it, and Plu-Perfect's CPM mod). MicroSphere offeres one and there is the SWP Co-Power -88. Does anyone have any comments regarding the trade-offs between them? Or can you refer me to past discussions on the subject? Is there really anything worth doing in MS-DOS that the SWP device can do?

2. Is this a legit forum for asking what I can do next in the Mike Goetz 550 pt Adventure? I've got a "London Dry" flask, a second mushroom, and an unmoveable dinghy, and no place left to go.
