I'm considering buying an amiga or 1040 st. I would first like to know some peoples experiences with availability of some engineering software for them.

I am particularly interested in:
Schematic Capture (Wire & net lists, Bill of materials etc etc)
Printed Circuit Layout (Multi layer ?)

optionally:
Logic simulation

Does anyone have comments/real experiences? I am also interested in just how the two machines can expand memory and hard disk and how much (approx) do these expansions cost.

Mail me please first. If interest shows in the answers I will summarise later.

Thanx in advance for any help.
Robin.
