This is a note to assembly language programmers.
If there is a difference in capitalization between equivalent .h(c) and
.i(asm) files then use the spelling in the .h file. Correct the spelling
in the .i files by editting the .i file. As new releases of the include
files come out fixes to inconsistent naming between .h and .i files will
be done in this manner. This is only for the include files in the graphics
directory though. I do not want to discuss the inconsistencies in naming
in the other directories.
     Thanks
     Dale Luck
