 Besides watching anime and reading manga
I am under-active in the Linux community finding
information and news in one instance and sharing
it with other via a column in the Status Register
of the Champaign-Urbana Computer Users Group.

Just to explain why I found this bit following.

> Moebuntu
>
> Moebuntu is an upgrade for existing Ubuntu installations designed especially for fans of Manga
and Anime, and it shows how the OS can be tweaked or fine-tuned to the extreme. There's an
automated setup tool which will apply the colourful desktop and icon themes – prepare yourself
for some alarming hues of pink if you do so. There's also a suitably rosy dash icon as well as an
array of wallpapers and Manga-style fonts.
>
> As gaudy as this may appear, the advantage of Moebuntu is that it has kept pace with the
times. The latest release supports Ubuntu 17.04 so unlike some of the other distros we've
highlighted, you can enjoy a taste of the weird and wonderful while having an up-to-date OS.
>
>   You can install the Moebuntu desktop theme, icon packs, wallpaper and so on by following
the steps on the Moebuntu website

This if from this site which will have a link I believe
to the Moebuntu site.
