Chuck Peddle the designer of the 6502 microprocessor and Commodore PET passed away on Dec. 15. Another great man gone. You'll be missed, Chuck!

Very sorry to hear this. This person has had a massive influence on my life and I didn't even know him personally. The creation of the 6502 directly lead to the home computing boom, and the early micro scene was essentially conjured from thin air between 6502 and Zilog's Z80.

I loves it. Went into computing as a career and here I am all these years later. Thanks Chuck.

Ian

Very sorry to hear about this. Apart from his technical accomplishments, I got the impression that he was a nice guy. He was always happy to speak at length about his role in the microcomputer industry for historians and tech writers.

Regards,  
Tristan
