---

My intel Mac wouldn't accept its password. In the past when this has happened I would simply shut it off and restart it and restarting it and then I could enter the password and I could use it. This didn't work so I tried option-command P R. Now the thing will chime and spin up but won't reboot. It won't accept any commands from the keyboard.

I bought a new Mac but would like to get my data off the old one.

How do I go about this. I tried reseating things but that didn't help. I

looked for a coda but I couldn't find one.

Thanks smac0031
