Announcing a new project 'Applecorn'. This is an environment to allow Acorn BBC Micro language ROMs to run under ProDOS on the //e Enhanced.

The project is still quite young and there is much still to do. However after only a couple of weeks of development I have been able to get four of the BBC Micro languages to run:

- BBC BASIC (with inline assembler)
- Acornsoft COMAL
- Acornsoft Forth
- Acornsoft MicroProlog

I am working on getting Lisp and BCPL to work.

Download a disk image from:
<https://github.com/bobbimanners/Applecorn>

Happy Kfest!

All the best,
Bobbi

That is very exciting! It is IMO by large the best version of BASIC ever made.
Looking forward to downloading it.
