A new game called "I,ROBOT", just hit the Toronto area. If you can find it, go take a look at it--it's a taste of the future. A zillion colours, high resolution graphics, and REAL TIME 3-D GRAPHICS WITH SURFACE FILLING AND HIDDEN SURFACE REMOVAL. It's basically a simple game, and there isn't that much movement (the processors are probably wheezing), but it's so natural it's extremely impressive when you realize what's going on.
