Does anyone out there know who makes connectors which plug in to the cosole expansion port? The one on my Speech Synthesizer, for example, is a 44-pin shielded card-edge connector with 0.1 inch pin spacing. As some of you may know, I am building an expansion unit for my computer, and would like to minimize RF interference. I would like for the unit to be as professional in physical apperance if possible, so solutions like wrapping the unit in aluminum foil is not considered optimal. If anyone out there with schematics would/could send me a manufacturer's name and part number, I would be deeply appreciative. I could take the synthesizer apart, but would prefer not to.
