I'm interested in information on the existence of all various NAPLPS videotex (decoder) packages currently available for the IBM PC/XT, and:

- + their features (in particular, the degree to which they implement NAPLPS),
- + their hardware & software configuration requirements,
- + their price,
- + and experiences with their performance.

I have seen the very brief survey on some of these packages published in the Microsystem Journal.

Please reply via electronic mail to hound!han.

Thanks.

Han Nguyen
