[........]

What I've heard about Deep Blue C is that it compiles to an interpretive
code (a P code if you will), and thus it is slow. Unfortunately, I've
also heard it is a more standard version than the other alternative(s).

Personally, I use Forth, as its fast and interactive. I rarely have
to recompile the whole thing when I make mods (no time for a nap),
as Forth is an incremental compiler (you can interactively compile
small bits at a time).
