Duo repairs?

Hey folks...

I am in need of a new AC adapter for my TurboGrafx-16 CD unit. These are the 11 volt, 1.53amp ones.

I am guessing these are extremely hard to find.

I have never seen one on eBay, and TurboZone Direct does not carry them. They recommend a RadioShack replacement for the Duo AC (which is a 10 volt), but as the TG-CD is an 11 volt unit, I doubt the 9-volt Radio Shack replacement would suffice.

I have Googled for a generic replacement, but it doesn't seem that ANYONE makes ANY sort of 11 volt AC unit.

Anyone?

Thanks,
Nat

I'm going to the local flea market here in Dallas this weekend, there's a guy who deals with Turbo stuff fairly often.. I'll see if he has any or if he knows of a good replacement to use. This is just for the stand-alone CD drive unit right, not the Duo?

Hi Leroy,

That is partially correct.

This is not for the Duo-- this is for the TurboGrafx 16 CD unit combined with the normal TG16 deck. The CD player can actually stand-alone, by itself independant of the TG16 deck and requires yet a DIFFERENT AC adapter. What I am looking for is the adapter that powers both the CD unit and the TG16 deck while combined together. It outputs 11 volts and 1.53 amps. the CD unit by itself requires a 10.5 volt (or something) adapter, but I'm not interested in that one.

Thanks in advance for looking for me,
Nat

Where can I get a Duo repaired? Mine worked fine, then one day after letting it sit for a while I turned it on and nothing.

Thanks,
Ken
