The SIG/M disks have each been placed in their own directory. If you
wanted EXAMPLE.FIL from disk number 98, for instance, you would say to
FTP:

GET MICRO:EXAMPLE.FIL
          ^^^--this is always three digits, use leading zeros
as required.

You can get a listing of all the SIG/M directories by doing:
GET MICRO:SIGM.CRCLST.

The above also applies to the CP/MUG directories. Subsitute CPMUG
wherever SIGM appears above.
