I am using a Sakata SA-1000 monitor with my C-64. The monitor does not have a built-in speaker. Does anyone know how I might be able to add a speaker onto the system? Thanks.

One rather simple way would be to plug the AUDIO OUT plug into the INPUT jack of a stereo system.

Adding a speaker: Archer (Radio Shack) has a miniamp-speaker that is easily driven by the audio-output with a homemade cord.

PS mail didn't go through so had to post.
