Have you spoken to the people at Macrotech? It is possible that the hard disk controller you have is incompatible because of timing problems, but I cannot say for sure. I don't recall hearing of the MI-286 operating with the Morrow controller, but it does indeed operate with the Konan and CompuPro controllers. The technical support people at Macrotech are _very_ cooperative and will go out of their way to try to assist you.

The MI-286 board buys much more than 8-bit Z80 operation - the speed improvement over the 8085/88 board is impressive. Don't give up just yet!

-Charlie
