Hello

I have just re-entered the world of cpm with a KayPro II. I have noticed that
the back of the computer has a phone connector on the back. Is this used for
phone communication? If so is there a simple mod (just add and ajust a few
parts to the board) I can make. I get this Idea because the KP IV has a modem
built in and it has all the same atributes (cpu and memory wise) that the II
does....

Jack
