I recently purchased "Inside Macintosh" in order to do some development work.
However, no documentation was supplied that described how to use the utilities
on the 3 MacStuff disks. For example, when I opened the Font Editor I only
received the 'watch' icon and no matter how long I waited the watch didn't
disappear. When I clicked the mouse, the system bombed. Then I tried to create
a screen using the 'screen maker'. The system didn't bomb but the next time
I loaded the MacStuff disk, the screen I created showed up instead of the
 screen. I assumed screenmaker was to transfer screens
created in MacPaint to applications.

Can anyone shed any light on this. Where can I get documentation describing
the use of the MacStuff disks? Can anyone help me get started using these?

Thanks!
