Can anyone give me a barebones description of what the resource manager does and in particular how to use it within the framework of Softech's MacAdvantage? I have been reading Inside Mac and Softech's reference manual and am totally confused. The ID nos. in Inside Mac seem to be 'magic'. Where do they come from and how do I determine whic ID nos. to create for my particular application? I am only starting to work with the Mac and would appreciate any information no matter how basic!

Thanks in advance!
