Hi All,

There have been rumors about a 65816 chip for a while now. I've heard that it is pin COMPATIBLE with the 6502/C02. The main problem I can see though is that applebus. Whether anyone will come with a way around this I don't know. As for the Beneath pple Dos book.... Yes it's still in print!!! You just have to find a good computer store Also the person that put the question on the net about seeking with a drive. All you have to do is enter the trk/sec in B7EC/ED (its in the book) Let Apple's RWTS do the rest for you. Unless ofcourse you want to make your own RWTS... In any case I would use there WTS.

Note: A while ago I posted on the net that APPLEWORKS doesn't support the OKIDATA 92 pinter (or any okidata) Well they still don't but if you have any printer with a GRAPPLER [+ too] you MUST get the APPLEWORKSconfiguration Now when you try and print in 96/132 etc.. mode it'll work right. The ONLY reason that this came about is due to the people that make the Grappler--Orange Micro. It still seems that apple refuses to help out thUSER!!!!!!!!!!

have phun!!!!
