I'm in the process of ordering a hard disk and expansion chassis for the IBM PC that I use at work. I am already using a hard disk and DOS 2.0 at home. Now my question. I have the option of ordering either DOS 2.0 or DOS 3.0 with my expansion unit; is DOS 3.0 worth the extra memory that it uses. I make extensive use of RAM disks so the memory used is an important issue. Has anyone out there upgraded from DOS 2.0 to DOS 3.0, was it an easy and worthwhile experience. I am interested in any opinions. Please reply by mail, I will post a summary to the net if there is enough interest.

Thanks for any help,

Mike
