I'm installing MEX on an Apple II CP/M system, but I can't get MXO-AP12 to assemble properly. I'm using MEX112.COM, MXO-AP12.ASM, and MXO-SM13.ASM. I tried MLOADing everything despite the Undefined-errors while assembling MXO-AP12, and MEX just warm-booted after giving the welcome blurb. (I assume this was because of the errors in assembly).

Is there another overlay out for the Apple (using SSM serial card) that I could use?
