John--
The Backgrounder from Plu*Perfect Systems has a resident
background utility, called SNAPPY, that includes
a screen dump for all Kaypro models. While running a program
(or at CP/M command level) it supports:
 - screen to printer
 - screen to file
 - list-device to file
 - full-screen editable notepad to file

Other utilites include background print spooling and command-line
editing. The Backgrounder itself allows CP/M resident commands
(DIR, ERA,...^C) to be run from within a program and provides
multi-feature key definition support.
