[Reach out, Reach out and byte someone]

Hi, Folks:

Does anyone out there have a Timex 2068? If so, has anyone found any useful information about it? Is there a disk drive available? Is there a '232 interface available? What are the differences between this machine and the ZX Spectrum? Does anyone have a detailed memory map and/or port map for this critter?

Any assistance or pointers to *good* material would be warmly welcomed.

Colin Pye
