Would anyone out there in netland have experience with expansion of the TS1000 keyboard?

I have at present a simple keypad wired up in paralell with keyboard. The problem is that when I use it it for some reason causes the CPU to recieve a halt instruction and from then on not to respond. Any suggestions?

And also a note to the person who sent me the reply in regards to TS1000 telecommunications back in December. All I recieved on this end was the message header,could you please resend your response.

thanx

Steve Brown
