This is in response to all the letters I have recieved requesting PD PROLOG. I have had very little luck responding to the letters, much less getting copies of PD PROLOG to those that wanted it. I am therefore submitting for the second time a copy of PD PROLOG in uuencoded format to net.sources. If you know someone who wants a copy of it that does not have acces to usenet, but does have access to BITNET, I think I can send them pd prolog over bitnet. However they must have the uudecode program which was posted to net.sources within the past week.

Good luck with the program!
