Does anyone know how, if at all, I can do graphics in monochrome
with an EGA card? So far, I have followed the hardware manual for
the card. I set the switches and jumper to say that I have a
monocrhome monitor connected to the card. Now the card emulates
the monochrome card. I did not get an EGA card to do this. It can
be done, can't it?

I will thank you after I get info, rather than in advance, like
everyone else :-).
