 Purely useless. Trust me. PCUNIX is slow, makes lots of temp files,
and crashes a lot in a development enviroment. Maybe it's ok for people who
don't spend lots of time compiling and running weird stuff. But I dunno about
that. I threw my copy away...

Think about it and if you really want I can give you a more precise rundown
via E-mail. The internals are all VAX/VMS/PinkCadillac, among other things.
The best I can say for it is it's "UNIX-like"
