In the middle of the new roms on the coco 3 there is some very strange code. The most interesting example of this is part of the old roms that got left behind. There was a command on the coco2 called DLOAD which was used to communicate between machines. On the coco3 it does some strange stuff: type in DLOAD folowed by a colon, followed by alternating ctl and alt keys (they look like @ and =). about three each should do. then hold down both the ctl and alt and hit return. wowie zowie. then do a soft reset and you're back to normal. It should look like this before you hit return

DLOAD:@=@=@=

f

Bonus question: do you recognize what you see?
