Like the subject says, I'm looking for any decent (*not* Lattice) 68000 C cross-compiler, which would run on an IBM PC/AT running SCO's Xenix System V, and compile to CP/M-68K object format (to eventually run on an Atari ST).

So far I know that Manx (Aztec C) doesn't have anything ready, Greenhills C only runs on VAXen, and of course Megamax, Alcyon, and Hippo C are only native mode.

"Help me Obi-wan Kenobi. You're my only hope."
