---

I have one of these that I got back in 2003 and was my first entry into getting a portable mac. Mine also does the 1/2 the display of lines but it's on the top. My fix (sorta) has been to flex the display but looks like it needs to have the case looked into. As for a fix I would suggest looking into ifixit:

<https://www.ifixit.com/Search?query=powerbook+5300>

and see if there's help there or ask a question there. Just scrolling down and I found one for monitor replacement:

<https://www.ifixit.com/Guide/Apple+Powerbook+5300+Monitor+Re+placement/5333>
