Am using the VICE emulator in Linux. Sometimes after starting a game I would opt to use a "joystick" (USB game pad here). But the game pad is not available then. I have to quit the emulator and start it again with plugged in game pad.

Is there a way to get the game pad working without restarting VICE?

Andreas

You know you are a redneck if
you have to check in the bottom of your shoe for change so you can
get grandma a new plug of tobacco.

No, it does the detection of USB HID devices on startup.
