i've had rotten luck espically making it dualboot, if its not display problems im faced w/ its that yaboot canot locate the FS on the disk for it.

anyone have luck using a 2TB Sata drive in these getting linux to work w/ the model that shipped w/ the FX 5200 Videocard?

http://www.everymac.com/systems/apple/powermac_g5/specs/powermac_g5_2.0_dp_2.html
(i think is teh model i have i cant tell w/o digging it out of storage and booting it up)

i initally planned to make it dualboot OSX 10.5 and Ubuntu MATE to get teh most usefulness out of it.

ok i havent powered it up in awhile and apparently the GPU was upgraded before i got mine this actually has the 6600 Nvidia card and not the 5200 (this brought me alot of trouble w/ nouveau drivers) if theres too many issues no ones really gotten around w/ this GPU i'll just stick w/ this or will hunt down (if anyone actually has suggestions) for a compatible MAC Edition card that'll still work w/ an PPCMac.
