---

I got my old WGS 8550/G3 out of storage today and the machine wont boot at all.

It powers on. All the drives power up but nothing on the screen and no sounds.

It has a G3 card installed. If memory serves it has 256mb of ram in it as well. Ive had this box for 15 years and it hasnt been powered on forever. I remember hacking OS 9.2 on it years ago.

I installed a new PRAM battery. No physical damage logic board that I can see. Its just dead. No CoD or anything.

Any help is always appreciated.

Mike

Pull everything including drive and all but one RAM module and graphics card. Reset PRAM
