I am in need of a program that will take a Wordstar document file and a list of footnotes and format the pages such that the footnotes end up at the bottom of the correct pages. About a year ago there was a company called Digital Marketing selling such a product, called "FOOTNOTE" but it appears that they have disappeared - have not seen an advertisement in nearly a year. I need this for IBM machines preferably but could work with one for Apple/CPM if necessary. If you know of such a product please respond by mail. Thanks.
