Is anyone Using Kazaa or E-donkey? It would be cool to share manuals, turbo
music, old TurboPlay magazines, old school EGM game review, etc. The
possibilities are endless. So who is using it and who wants to? Imagine a
server dedicated to TurboGrafx.....

Erik

--- Turbo List Information --
For the complete list of all PCEngine/Turbo games ever released (includes
titles and catalog information), be sure to check out pce.complete.catalog
available from the Turbo List Fileserver.

I'd be glad to set up a FTP server if someone has some content to upload.

Subject: Cleaning your Duo's CD Lens

So I bought a "Cd Lens Cleaner," you know... those cds with the micro
brushes on it that clean the lens (or at least claim it). I know for a
fact that those VHS cleaning tapes are BAD (you know, the ones that you put
a drop of "solution" on a little fabric tape), because they are "abrasive."
I have been told this by a VCR repair guy before, and happen to agree with him.

Ohh, back to the Topic. Of course the CD Lens Cleaner does not have and
solution (that would be bad) but it does have little brushes... So the
question is, is this safe to use on my Duo? It claims to be for CD players
and DVD players, but you know.. the Duo is "different."

DarkMan @ www.darkcityproductions.com
PC Engine & other stuff.

I used one of those things on my duo once. Didn't seem to do any harm, but
it sounded harsher than I thought it would, so I never used it again. And
now my duo appears dead. (unrelated matter).

Subject: Help with PC-FX & Duo Tech Spec's

I'm trying to compile a system dex that covers what kind of processor a system used, RAM, co-processors, sound chips, etc., but I came to a brick wall when I got to the Duo and PC-FX. Either I couldn't find any information on the PC-FX, or there were so many conflicting tech spreads on the Duo that I decided to beg for some help here with what's under the hood of these two systems. What I need is this:

Release Year:
Processor:
Speed of Processor:
Co-Processor:
Graphical Effects:
Development Code Name (before it was released):
ROM (size of OS basically):
RAM (main and video, sound):
Colors (possible & simultaneous):
Sound Processor & Channels:

The PC-FX I'm completely clueless on, and as I mentioned, the Duo is extremely tricky since nobody seems to agree on what's under the hood, like if the system has 64k RAM, plus the additional 128k CD cache, plus the Super CD's 256k. Any help here would be very much appreciated. =)
Later.
