I really hate to say this, but I really hope the new Atari's dont make it.

Dont get me wrong, I have been an atari fan for years; I was one of the originals to buy the 16K atari 800, with the old O.S., old drive, lots of money back then.

A couple monts ago, I finally decided I needed a new computer, and spent my life savings on an IBM.

Now, atari says they are going to put out a machine that does everything I could ever want, for under \$500.

This really ticks me off, the minute you buy something, it gets outdated.

I guess there is nothing you can do to stop progress.

(actually, if the new ataris are any good; i will probably be one of the first in line to buy one; after all, i could always use a THIRD computer!)

Remember.....

Only you can prevent software piracy.

What a stupid thing to say. Software piracy is a crime, and the sooner you realize it the better off everyone will be. There is no excuse for the stealing of other peoples things.
