Posted a second version of HXA at:

www.home.earthlink.net/~hxa

Macros, conditionals, includes, etc. Knows a lot about real processors but little about real computers, so tries to provide some facilities to make it easy to adapt to real computers.

Fixed a couple of bugs. Added a few new pseudo ops. Added support for W65C816S processor to HXA65 variant. A bit faster.

GPL licensed freeware, source code provided.
