[........]

I too, would like to hear about any IBM compatible 'curses' package
that might be available.

I see this request often enough - better post what little I know.
In a 2-page ad in PC Tech Journal, PC-Brand advertises a product from
Lattice called "Curses - a screen management interface to swear by" for
$125. Having used curses under Unix, I'd change the last preposition
in the quoted comment. I know absolutely nothing about Lattice's package,
except there it is in the ad. I don't even know which month - I have only

a photocopy here.

Hi....
 Does antbody out there know of a curses compatible graphics
package for the IBM PC. I want to do a graphics project that i could
later port to the PC. If somebody knows of one please send me information
or references. I have lattice C but would use any C compiler if could use
curses library. Thanx in advance...
