Hi. My in-laws dug up a TI 99/4A home computer (literally dug up out of the dusty dungeon!) for my daughter (8 yrs. old) to use. What I need to know is if there is still a source for the plug in ROM modules that it uses. I'd especially like ones for math (+,-,*,/) and spelling, but any kind will do. Otherwise it just sits around, and I don't feel like fighting with a cassette recorder/player. A far cry from a Symbolics!

If you know of any promising leads (including selling your own stuff) please let me know. Thanks.

Christopher Rosebrugh, Silc Technologies Inc.

Yes! Triton Products Company, P.O. Box 8123, San Francisco CA, 94128. (800) 227-6900 for questions or orders.

Their latest product is the Triton Turbo XT that turns your TI into an IBM-PC. For \$499 ! Love it !

Last time I checked, Triton was still selling ROM cartridges for the TI99/4A. Their address is:

Triton Products Company
PO Box 8123
San Francisco, CA 94128
1-800-227-6900

Their christmas sales brochure claims they can be reached Monday-Friday 6AM - 6PM, Saturday 9AM - 4PM Pacific time.

All the usual disclaimers apply of course. I'm just quoting from their sales brochure.....

Somebody already mentioned Triton, the other mail order house still committed to the TI 99/4a is Tenex:

Tenex Computer Express
P.O. Box 6578
South Bend, IN 46660
219-259-7051

What seems like a couple of centuries ago, I bought an Expansion Chassies and Floppy drive from them and was quite satisfied with their service.

What's really amusing is that they are now advertising a Myarc 99/4a compatible computer board that plugs into the expansion chassies, has a TI9995 processor, double resolution video chip, a real keyboard and runs 2-3 times as fast. This is where TI could have been years ago if they had had their act together and more realistic perceptions of the home computer market.
